Reference List:	12

1. Goal 13

Climate Change is a worldwide issue directly addressed by SDG:13. Due to rising global temperatures influenced by green house gas emissions, Climate disasters like floods, and rising sea levels are becoming more common. Global economies, human health, and ecosystems are all at risk from these shifts (*Climate action - united nations sustainable development, n.d*).

Millions of people could be displaced as a result of the melting polar ice caps and increasing sea levels endangering coastal areas. As species struggle to adapt to changing climates, vital ecosystems that supply food, water, and other resources are being undermined, leading to an acceleration of biodiversity loss. (*Effects - NASA science, n.d*)

Climate change has a significant economic influence on companies, infrastructure, and agriculture. The most vulnerable are developing nations, who make up the least amount of the world's emissions and have the greatest difficulty adjusting to these changes. This makes the world's inequality worse and emphasises how urgently we need to work together internationally (Milman, 2024). To ensure a sustainable future, climate change must be addressed. Reducing emissions, boosting renewable energy, and building resilience quickly are essential to preventing global warming and averting disastrous effects on human and ecological systems.

2. Tesla's Electric Vehicles

Tesla's EVs are a good example of a product that will help solve this problem as they align with SDG:13. Tesla's shift from internal combustion engine (ICE) automobiles to electric vehicles (EVs) contributes to the reduction of greenhouse gas emissions which is a significant factor of global warming. Standard non-evs release CO₂ and other pollutants because they run on fossil fuels. Tesla's electric vehicles, on the other hand, have zero tailpipe emissions, greatly reducing the transportation sector's carbon impact. (*Impact report highlights, 2023*)

Integration of renewable energy is also advanced by Tesla. Its EVs can run on renewable energy sources like wind and solar, which lessens reliance on fossil fuels. Research indicates that EVs have a smaller total carbon footprint than ICE cars, even when charged with power from a variety of sources (Troskie, 2023). Tesla's technologies immediately contribute to worldwide efforts to fight climate change by cutting emissions from one of the main sources of pollution, transportation, which accounts for a substantial portion of global emissions. (*Impact report highlights, 2023*)

Tesla's EVs are essential in tackling the pressing issues brought on by climate change since they accelerate the shift to sustainable energy and transportation.

3. Vision Statement

To lead to global shift to sustainable transportation through innovative technology for a cleaner, more connected world.

4. Stakeholders

Customers:

Eco-Conscious Consumers: People that value sustainability in the environment are the main market for Tesla's electric vehicles.

Tech Enthusiasts: Tech-savvy customers are drawn to Tesla's cutting-edge technology and innovation.

Luxury Car Buyers: Additionally, Tesla positions its EVs as premium automobiles, drawing buyers who value performance, and luxury.

Suppliers:

Ganfeng Lithium (Lithium)

BHP (Nickel)

Glencore (Cobalt)

Modine Manufacturing (Battery Chiller)

Rohm and Haas (Speciality Materials)

LG Energy Solutions (Battery Parts) (Maverick, 2024).

Most of these suppliers are for battery parts as the battery is one of the most important components of the vehicle.

5. Industry Analysis

*Buyer Power: **High***

Customers have high power because of the increased competition and availability of alternative EVs in the market. This also means customers can push Tesla for more competitive prices and features.

*Supplier Power: **Moderate***

Tesla needs specific suppliers which means they have some bargaining power. However, Tesla have reduced some of this power by securing long term contracts and producing batteries in house.

*Threat of Substitutes: **Moderate to high***

There are a few substitute options for EVs that are not Tesla's in the market as company's have started producing more EVs making the rivalry high. Public transport, ride sharing services and new innovations like e-bikes and e-scooters are also substitutes.

*Threat of New entrants: **Moderate***

To get into the EV market a company will need a high capital investment, innovated technology and brand recognition making the threat moderate. This is because more already existing car company's are working on new innovation in this market to release EVs.

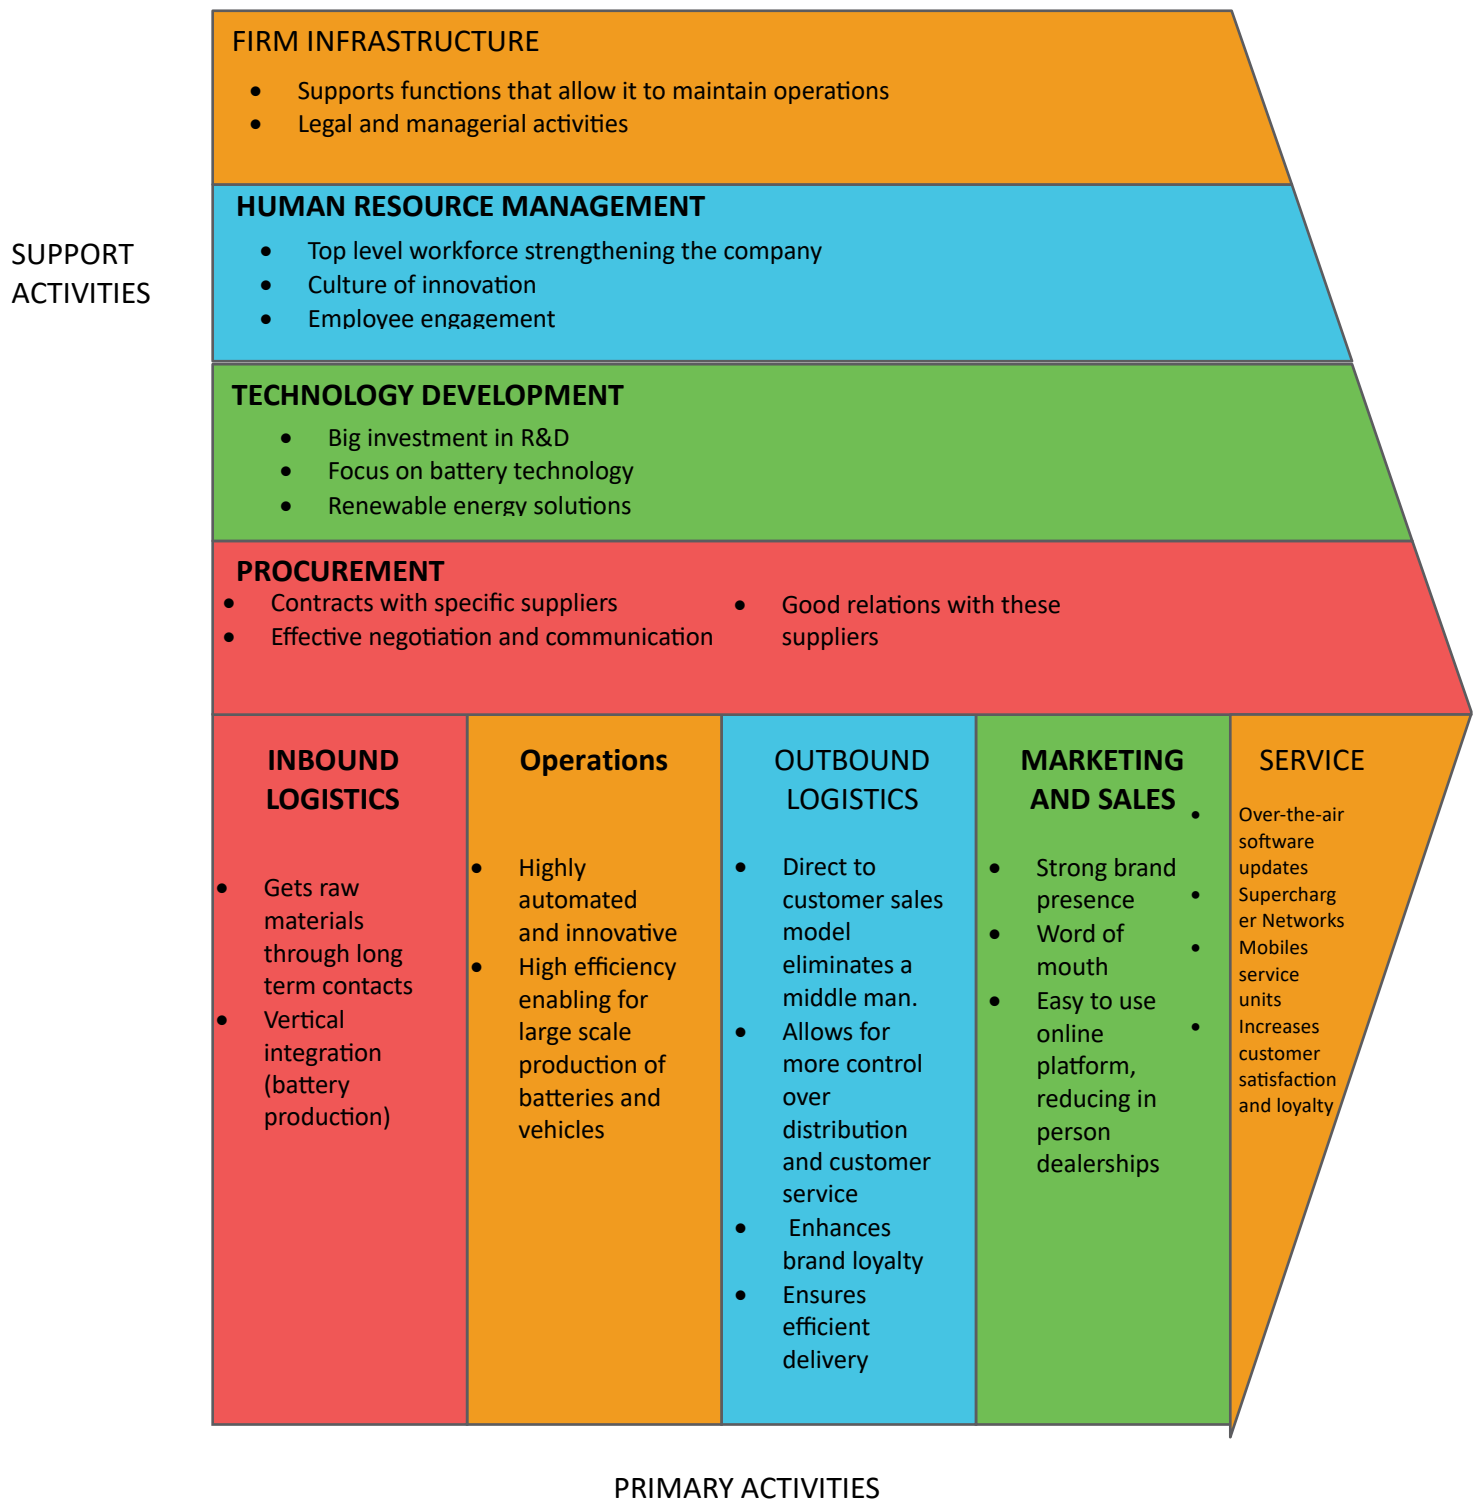

*Rivalry Amount existing Competitors: **High***

Industry Rivalry is High due to the increasing number competitors and the quick rate of innovation with company's Ford, Hyundai, Mercedes active in the market.

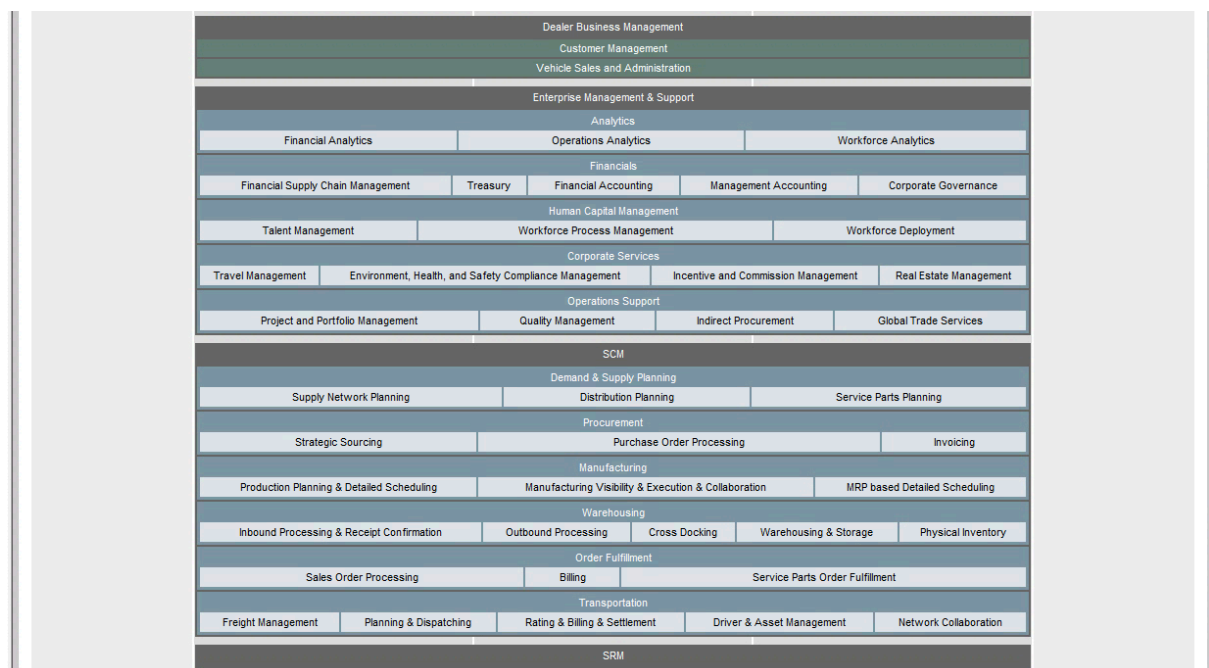

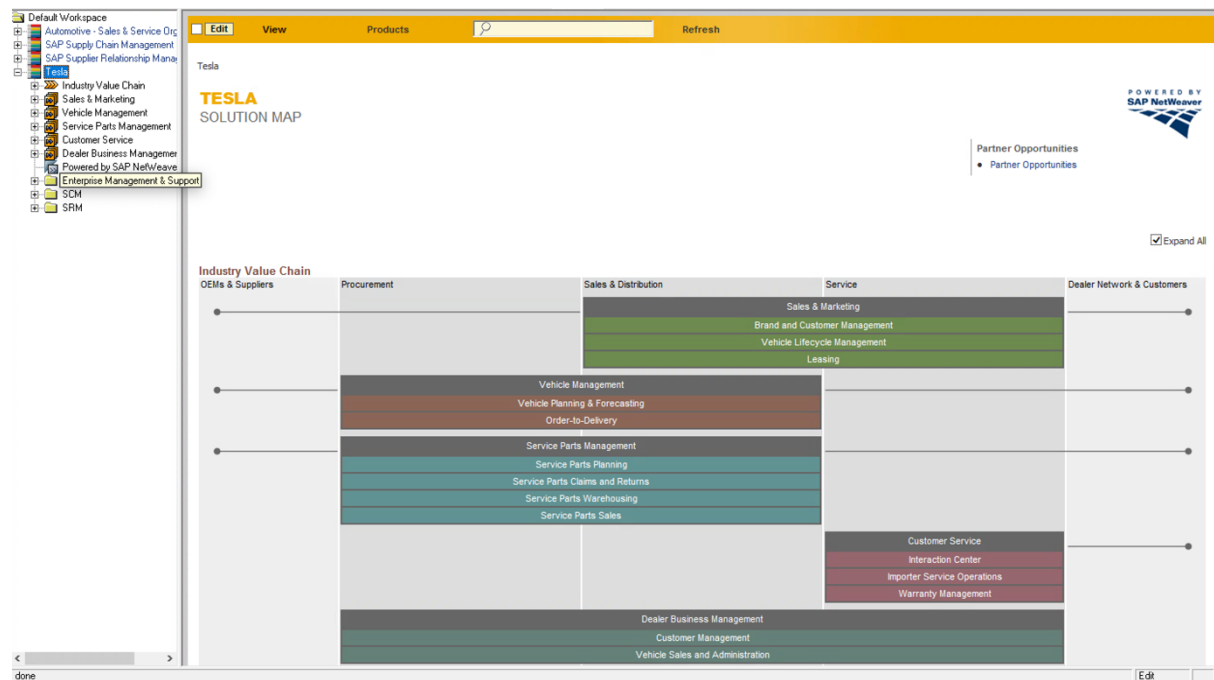

6. Strategic Analysis

Using the Value Discipline model I would adopt the product leadership strategy. Tesla focuses on the value, quality and performance of their EVs through innovation and technology. Tesla sets industry standards with its constant introduction of innovative technologies like Autopilot, over-the-air upgrades, and high-performance batteries. This attracts buyers who are both eco-conscious and tech-savvy. By concentrating on producing products of the highest calibre with unparalleled performance and cutting-edge technology, Tesla is able to command a premium price and uphold a solid reputation as a brand which is why the product leadership strategy is chosen.

7. Value Chain

8. Solution Map

SCM				
Demand & Supply Planning				
Supply Network Planning	Distribution Planning		Service Parts Planning	
Procurement				
Strategic Sourcing	Purchase Order Processing		Invoicing	
Manufacturing				
Production Planning & Detailed Scheduling	Manufacturing Visibility & Execution & Collaboration		MRP based Detailed Scheduling	
Warehousing				
Inbound Processing & Receipt Confirmation	Outbound Processing	Cross Docking	Warehousing & Storage	Physical Inventory
Order Fulfillment				
Sales Order Processing	Billing	Service Parts Order Fulfillment		
Transportation				
Freight Management	Planning & Dispatching	Rating & Billing & Settlement	Driver & Asset Management	Network Collaboration

SRM				
Purchasing Governance				
Global Spend Analysis	Click to expand/collapse Buy Management		Compliance Management	
Contract Management				
Legal Contract Repository	Contract Authoring	Contract Negotiation	Contract Execution	Contract Monitoring
Collaborative Procurement				
Self-Service Procurement	Services Procurement		Direct / Plan-Driven Procurement	
Supplier Collaboration				
Web-based Supplier Interaction		Direct Document Exchange		Supplier Network
Supply Base Management				
Supplier Development & Performance Management

9. Processes

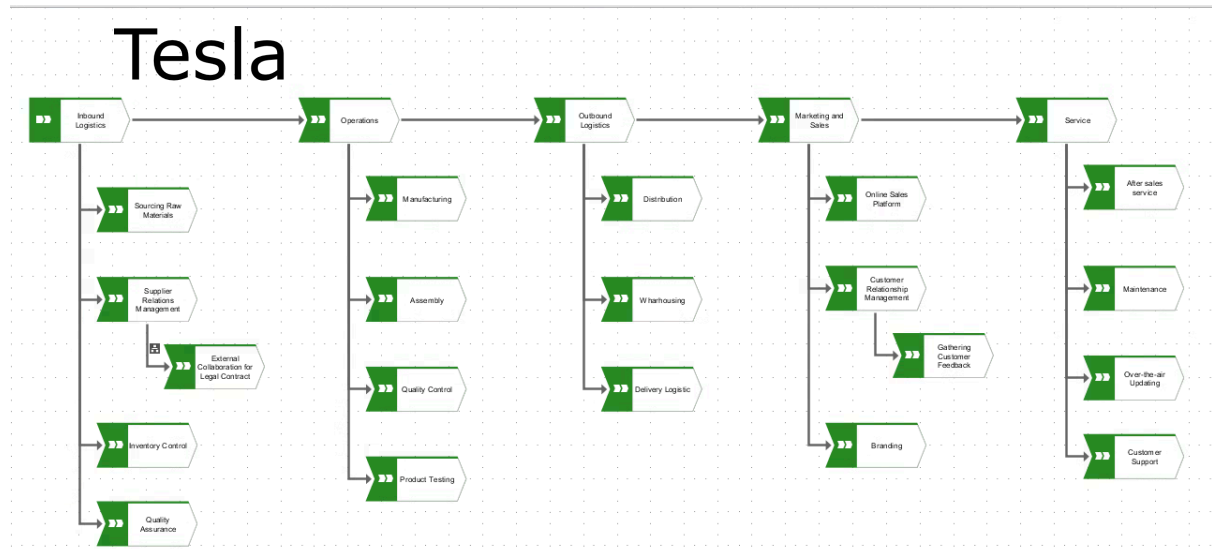

Product Innovation:

The development, and improvement of EV technology including software upgrades, autonomous driving, and battery efficiency are all part of this process. Tesla continues to be at the forefront of the Ev market by continuously pushing the envelope. This procedure is essential for fulfilling consumer demands, outperforming rivals, and promoting the use of environmentally friendly transportation.

External Collaboration for the legal contract.

Transparency and mutual consent between Tesla and its suppliers are guaranteed via the "External Collaboration for the Legal Contract" process. This approach is important as it makes sure that final agreements are thoroughly examined and matched with the interests of both parties, stimulates collaboration, and lowers risks by allowing suppliers to revise contracts and submit revisions through a secure portal.

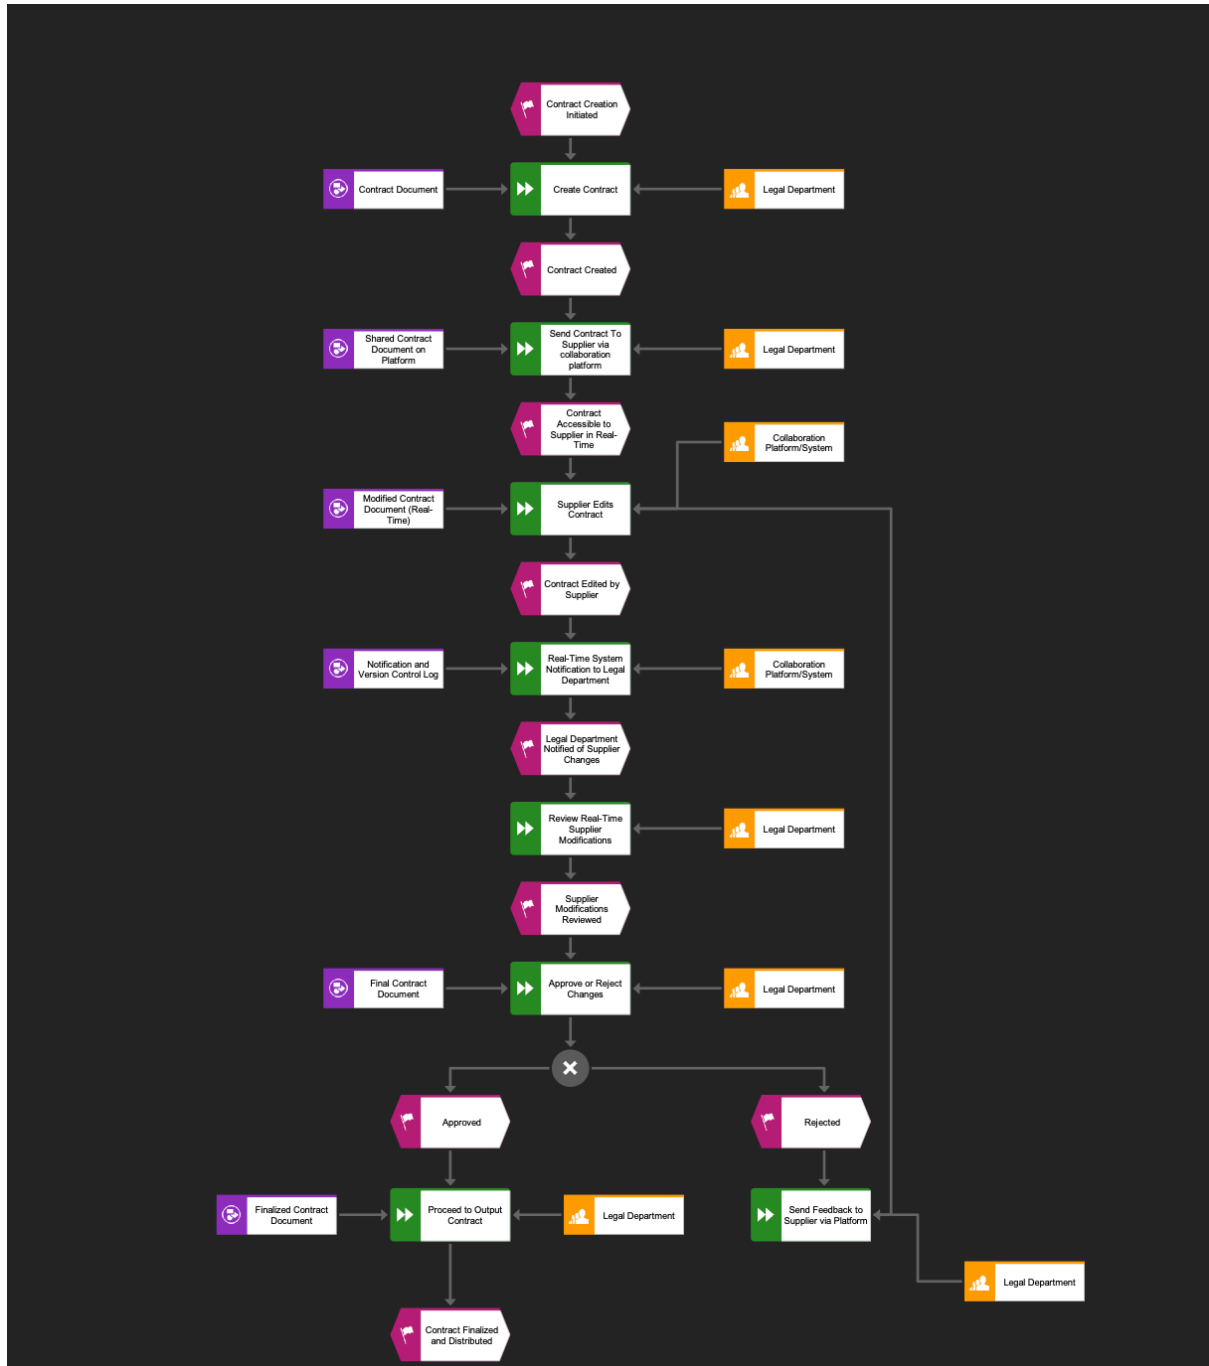

10. Value Chain ASIR

11. AS-IS

12. TO-BE

With the addition of automated version control and real-time collaboration tools, the TO-BE process improves upon the AS-IS process. Suppliers can edit contracts directly on a secure platform, tracking changes and notifying the legal department quickly, in place of offline alterations and manual uploads. As a result, there are fewer delays, fewer mistakes, and quicker review cycles. With everyone working on the most recent version of the document, the enhanced procedure promotes greater openness, streamlines the contract management process as a whole, and guarantees accurate, timely, and productive external collaboration.
